

Taking Photos of your SheShed

A STEP-BY-STEP GUIDE

We love receiving photos of our beautiful customer cabin builds. From home offices, country cottages, tool sheds, lakeside retreats, to Mediterranean Hair Studios – we love to share all the different ways our SheSheds can be used and sometimes even share these on our website to inspire others too!

Want some handy tips on taking photos of your own SheShed? We've put together a few tricks and tips to help you share your best images.

01

LIGHTING

When taking your photo, lighting is key, natural light is always best. If you have a special lighting feature, a night shot can be a beautiful addition, otherwise stick to during the daylight.

02

FOCUS

Choose a focal point for each shot, we can see the best parts when you have a defined focal point.

03

ANGLES & FRAMING

When taking a photo of your SheShed cabin, it's often helpful to find a straight edge and line up your camera on your phone so that the walls look straight on your screen. If taking photos outside think about framing with trees or landscapes.

04

DETAILS

We love seeing interior and exterior details. Have you added a deck, or maybe beautiful landscaping or a lovely business you are running from your SheShed? We would love to see the special details that you have put into your cabin.

05

MORE

We love arrival shots, build shots, faraway shots and wide shots, so please don't be afraid to send us more than one shot of the same thing.

SHESHED PHOTO

checklist

Documenting your SheShed build journey has been made easy with this Photo Checklist. This is a guide only, we love to see any kind of images, before, after and all the in betweens of building a SheShed Kitset Cabin.
